INTEGRATED SERVICES FOR CLEAN ENERGY TRANSITION IN GREEK MUNICIPAL BUILDING RENOVATIONS

We support Municipalities and Regional Authorities on their path towards zero emissions

RenoInGR

RenoInGR's Goal

RenoInGR aims to establish a **One-Stop-Shop** (**OSS**) that will provide Municipalities and Regional Authorities with comprehensive support for the maturation and implementation of energy renovations of their building stock.

This support will help local authorities to:

- accelerate renovation projects to meet Climate Change targets
- reduce energy costs by achieving nearly zero energy demand
- improve building performance, ensuring thermal and visual comfort and clean indoor air
- enhance the aesthetic quality of the building stock
- contribute to environmental protection by reducing the carbon footprint, while at the same time creating local jobs

In this way, municipalities contribute proactively to climate goals, improving conditions for citizens and employees, reducing energy costs, and stimulating local employment.

RenoInGR

Integrated Support Services

- technical assistance for renovation studies and financing
- model contracts for zero-emission and nearly zero-energy building renovations
- bundling of buildings to accelerate project development and achieve economies of scale
- support in project financing through innovative schemes, such as Energy Performance Contracts
- technical and financial tools to assist project development
- information and knowledge dissemination activities

Pilot Implementation

The OSS services will be tested in 100 municipal buildings:

- in sixty buildings, the full range of services will be provided - from energy audits and tender documentation to securing financing and launching renovation works
- in twenty buildings, advisory services will be offered throughout all stages of project development
- in the remaining twenty, emphasis will be placed on building bundling into clusters to facilitate smoother implementation
